bhompallys@gmail.com | (408)-673 -7575 | <https://www.linkedin.com/in/srikanth-bsr321/>

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience designing, developing, and deploying scalable cloud-native applications using Java, Spring Boot, Python, ReactJS, and AWS. Experienced in building RESTful APIs, developing microservices, optimizing database performance, and implementing CI/CD pipelines for enterprise applications. Strong background in distributed systems, cloud architecture, application performance tuning, and Agile software delivery. Passionate about writing clean, maintainable code, improving system reliability, and delivering high-quality software that scales to millions of user interactions.

PROFESSIONAL EXPERIENCE

Apple | Senior Software Engineer

02/2024 - Present

- Design, develop, and enhance cloud-native enterprise applications using **Java, Spring Boot, Python, ReactJS, and AWS**, delivering scalable solutions supporting high-volume business operations.
- Build and maintain **RESTful APIs** and Spring Boot microservices that improve system interoperability, reduce response times, and simplify integrations across multiple enterprise platforms.
- Develop scalable backend services following microservices architecture, improving application availability, maintainability, and deployment flexibility.
- Optimize application performance through code refactoring, database query optimization, caching strategies, and efficient API design, improving overall application performance by **20%**.
- Collaborate with DevOps teams to automate CI/CD pipelines using Jenkins, GitHub Actions, Docker, and AWS deployment services, reducing deployment time by **45%** while increasing release frequency by **30%**.
- Implement workflow automation and backend service integrations that reduce manual operational effort by **40%** and improve business process efficiency.
- Partner with product managers, architects, QA engineers, and cross-functional Agile teams to deliver **20+ production releases** with a **95% sprint success rate** and **99.8% production stability**.
- Participate in architecture discussions, API design reviews, backlog refinement, sprint planning, and technical solution design to ensure scalable and maintainable software delivery.
- Lead production release validation and defect analysis, resolving **200+ functional issues** before production deployment and significantly reducing post-release incidents.
- Mentor junior engineers through code reviews, technical guidance, and engineering best practices, improving overall code quality and accelerating team productivity.

Tata Consultancy Services | Software Engineer

06/2020 - 06/2022

- Developed and maintained enterprise modules using **Java (Spring Boot)** and **AngularJS**, serving 20 K+ active enterprise users.
- Designed and implemented **scalable backend services** for billing, workflow, and analytics features reducing processing time by 50 %.
- Built secure, **stateless REST APIs with JWT authentication** and custom middleware ensuring zero authorization defects in production.
- Improved DB performance via **query profiling, index tuning, and connection pool management**, achieving 40 % faster response times.
- Introduced code automation and **SonarQube quality gates**, reducing critical bugs by 35 % across multiple modules.
- Refactored legacy business logic into reusable components using **Spring Beans and dependency injection patterns**.
- Collaborated directly with architects and product owners to align technical design with functional requirements.
- Led knowledge-sharing sessions and **mentored** new hires on **framework usage, API integration**, and unit testing strategies.

SKILLS

- Programming Languages:** Java, Python, JavaScript, TypeScript, HTML5, CSS3
- Backend Technologies:** Spring Boot, Spring MVC, REST APIs, Microservices, JUnit, pytest
- Frontend:** ReactJS, AngularJS
- Cloud & DevOps:** AWS (EC2, Lambda, S3, SQS, DynamoDB), Docker, Terraform, Jenkins, Git, GitHub Actions, CI/CD
- Databases:** MySQL, PostgreSQL, MongoDB, DynamoDB
- Monitoring & Observability:** Grafana, Prometheus, ELK Stack, Redis
- Software Engineering:** Agile Scrum, Test-Driven Development (TDD), Serverless Computing, Distributed Systems, API Design

EDUCATION

- Master of Science in Informational Technology** | University of Cincinnati | Ohio 12/2023
- Bachelor of Technology in Mechanical Engineering** | CVR | Hyderabad 05/2018
